All IC School Buses Come Standard with the Interchangeable BTI Seating System

The IC Bus BTI Seating System offers you a solution for all your future seating needs. For the first time, at your discretion, you can retrofit a bus from standard seats to three point seat belts or to integrated child restraint seats (ICS) without the hassles of removing the complete seat and tearing up the floor for needed structural reinforcements. **And it's only available from IC Bus.**

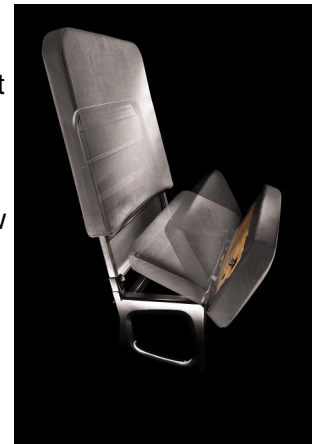

A RETROFITABLE SEATING SOLUTION

Here's how it works. IC Bus, in cooperation with IMMI, has developed a seating system that allows for easy replacement of the seat back for upgrades from a base seat to three point belts or ICS seat in a simple 5 minute process. Using common shop tools, a technician can remove the existing seat back, and bolt in a replacement as needed. Whether upgrading to three point belts across your fleet, or you need to replace a damaged seat back, the IC Bus BTI Seating System is the flexible seating solution that provides you with the options to make smart, low cost seating decisions now and in the future.

The great part is, any IC Bus brand school bus built after January 2010 comes with the base level IC Bus BTI Seating System standard. So the capability to upgrade your seats is already built in, at no additional cost to you.

So whether you foresee future federal mandates for three point belts and want to be prepared to retrofit your entire fleet, are looking for additional flexibility within your fleet for the front row or spares, or are a contractor wanting the flexibility to move buses between contracts with different requirements, the IC Bus BTI Seating System is the solution for you.
